Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /cgn2_6/ptodata/1/pubpna/US60_NEW_PUB.seq:* /cgn2_6/ptodata/1/pubpna/US60_PUBCOMB.seq:* /ptodata/1/pubpna/US10_PUBCOMB.seg

//note="Organ: eye; Vector: pyT73-pac (Pharmacia) with a modified polylinker; Site_1: ECOR I; Site_2: Not I; UI-E-EJI is a subtracted CDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-df primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pyT73-pac vector. The oligonoucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tall. The sequence tags for this library are: fetal eyes, AGNATCAGGA; lens, CGATTAGCGS, retina, CGCGCAT; optic nerve, CCATTAAGGS; retina, CCGCS, Retina Foveal and Macular, GTCC; RPE and Chorold, ACCTA. This library was created for the program, Gene Discovery in the Visual mach retire.

according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGANCCAAGA; eye anterior segment, AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CGCGG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

                                                                                                                                                                                                         9
                                                              The present sequence is a DNA encoding tumour suppressor homologue protein, p331NG2 which is homologous to human tumour suppressor protein, p471NG3. The tumour suppressors of the invention are involved in the regulation of cell proliferation and in the control of cellular aging, anchorage dependence and apoptosis. The tumour suppressor protein, p471NG3, nucleic acids encoding it and antibodies against it are useful for diagnosis, prevention and treatment of tumours and cancers. The p471NG3 DNA is also used in gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents the human tumour suppressor gene INCIL. The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophangus, colon, thyroid, parcotid gland, bladder, ovary or pancreas INCIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of

The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian

TUSUP sequence was identified from a human lung cDNA library. The protein is 240 amino acids in length and has one potential CAMP and CGMP dependent protein kinase phosphorylation site, nine potential protein kinase c phosphorylation site, five potential casein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, five potential tyrosine kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation site. TUSUP pass structural and chemical similarity to p33. TUSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal tracts or of the immune system. Agonists of the TUSUP protein can be used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of diagnostic probes and primers.

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or|polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because, they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
derived from the 5' ends of mRNAs and even in those cases where longer both sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ō

            suppressor protein (TUSDP) see AAY52199. The TUSUP protein is 240 amino acids in length and has one potential CAMP and CGMP dependent protein kinase phosphorylation site, nine potential protein kinase phosphorylation site, five potential casein kinase phosphorylation site, five potential casein kinase phosphorylation site, site, and one potential tyrosine kinase phosphorylation site. TUSUP has structural and chemical similarity to pil TUSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of diagnostic probes
                                                                                                                                                                                                                                                                                                                                                                                                                  849

                                                                                                                                                                                                                                                                                                                                                                              the p53 pathway occurs in a much larger proportion of the p53 gene ramains unknown but p53 has been found to act in cooperation with many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with 1001 in cooperation between ING1 and p53 suggested that ING1. Functional cooperation between ING1 and p53 suggested that ING1 mechanism of the ing1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers and chromosomal location of the ING1 in head and neck cancers and chromosomal location of the ING1 in head and neck cancers and chromosomal location of the ING1 in head and neck cancers and suggesting that ing1 revealed mutations in ING1 nor significant variations in its cancer elology. However, alternative initiation exons of the ing1 cancer elology. However, alternative initiation exons of the ing1 gene, each having that rown promoter have been discovered.

Expression of one promoter (la) produces a protein having on identical C-terminal fragment to ING1 but an additional 104 of ing1 mindentical C-terminal fragment to ING1 but an additional 104 of ing1 mindentical condentinal fragment to ING1 but an additional 104 of ing1 mose expressing wild type p53 p37NG1 is able to cause proliferation of an oncogene. When overexpressed in cells (even tharacteristics of an oncogene. When overexpressed in cells condenting expressing the concept of ing1 by hybridisation with an outles and encoding exon 10 of ing1 by hybridisation with an outles of encoding exon 10 of ing1 by hybridisation with an outles and encoding exon 10 of ing1 by hybridisation with an original peptide of p37ING1 can also be used to raise antibodies that can also be used in detection methods for the p37ING1 variant. The polypeptides may be useful in gene therapy for treatment of cell erigin expressing and encoding expressing the detection methods for the p37ING1 expressing and expressing expressing expressi
                                                                                                                                                                                            Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               176 TCGCTGCCCCACGACATGCAGGAACGTGTCTGTGCTGCGAGAGGTGGACAAATAT
